

A.P. Clamshell Filler Unit

Filling

Closing

BEI's A.P. Clamshell Filler is a one piece unit including the filler and closer as part of the complete unit. An optional desnester is available.

The A.P. Clamshell Filler is a volume filler. It can fill most clamshell containers on the market today with little or no adjustment. When adjustments are needed, it's the easiest and quickest on the market. No tools are needed to make adjustments.

Variable speed allows filling speeds to match the incoming fruit rate. Speeds from zero to 120 plus per minute per lane are possible. Therefore, two lane units fill up to a rate of 240 plus clamshells per minute.

The A.P. Chamshell Filler Unit is wired for 120 VAC, so it is ready to plug in and begin work.
