

Center Drive Inspection Conveyor

BEI's Center Drive Inspection Conveyor provides a large area for sorting product. The standard conveyor comes with a 30" center inspection belt, two 3" trash belts and is 15 ft in length. The trash belts run in the opposite direction as the inspection belt does. The conveyor is powered by a variable speed motor. The standard belt material is plastic, stainless steel belting is also available. The frame is constructed of stainless steel. The inspection conveyor may also be used to accumulate product from other equipment or to transport product from one piece to another. An optional reversing switch allows you to reverse the direction of the conveyor.
