

Model "XL" Blower Cleaner

Model "XL" Cleaner with Elevating Belt Feed Hopper

BEI's Model "XL" Blower Cleaner is the largest cleaner that we build. It has a hopper width of 48 inches. The large inclined hopper allows for low dump height. The crescent top belt carries the fruit up to the blower without rollback. The belt is powered by a 3/4 HP DC motor which is variable speed to allow for speed adjustments at the turn of a dial. The Blower Motor is 5 HP with an electronic inverter that allows variable speed with the push of a button. This provides easy changes for the removal of trash from the berries. The blower on the "XL" Cleaner is unique in that it uses a BEI manufactured Cross Flow Fan for even air flow across the width of the cleaner.

The Model "XL" can effortlessly handle 10,000 pound of berries per hour. It comes ready to run, merely connect your electrical input and attach the upper stack.
