

Elevating Model "L" Blower Cleaner

Model "L" Cleaner with Elevating Belt Feed Hopper

The large hopper allows for low dump height, it also permits the operator time to do other jobs without the belt feed hopper emptying out the berries. The special crescent top belt carries the fruit up to the blower without rollback. A variable speed motor allows for speed adjustment at the turn of a dial while the chain drive prevents any slippage of the crescent top belt.

The air flow is variable for excellent separation of leaves and trash from the fruit. The Model "L" Cleaner effortlessly handles 4,500 pounds per hour. The Model "L" comes ready to run, merely connect your electrical input.

3 HP	Blower Motor	230 VAC	18 Amps
1/8 HP	Belt Feed Hopper Motor	115 VAC	2 Amps
