

# S.B.P. Clamshell Filler

BEI's Model S.B.P. Filler is a new product that was developed to cover the need between BEI's full size Universal Filler and our famous Table Top economy size filler. The Filler uses a **Single Belt Pair** similar to the Table Top filler which carries the clam shells containers from one end of the filler to the other. The S.B.P. Filler also incorporates a full size hopper for gentle and accurate filling of clam shell pints, quarts and 1/2 pints. The filler unit is 7' long, similar to the Universal Filler. The Filler is a direct match-up with BEI's Clam Shell Denester and Thumper Closer.

Variable speed allows a filling rate to match your input conveyor. All places of berry contact are stainless steel. The Filler comes wired for 120 VAC electric ready to plug in and start filling your clam shells.
