

# BEI Belt Sizer

The **BEI Sizer** is designed to help you size your next fruit crop quickly and easily. The round belting used for sizing has a standard spacing of 3/8" to allow small fruit to pass through onto a conveyor (spacing can be varied to customer specifications). This spacing is kept at a constant by our special rollers which hold the belts in place. The small fruit can be conveyed off and discarded, while the larger fruit is then transported to the next piece of equipment. Our sizer is available with a left or right hand output for your convenience.
