

Tilt Belt

Picture shows Tilt Belt with shipping braces

BEI's Tilt Belt provides an effective means of removal for soft berries and trash. When a firm berry travels across a moving Tilt Belt, it will roll directly across it. A soft berry will be carried along the belt. A gradient of firm to soft berries will be discharged off the side of the belt. Small amounts of field trash will be removed.

The Tilt Belt is powered by a DC rectified control allowing an infinite adjustment of speed from 0 to 130 FPM. The tilt of the belt is also adjustable providing complete flexibility needed to meet varying product quality.
